7 February 2019
art stakeholders meeting

News

- *art* 3.02.01 just tagged today
  - Includes fix in `cetbuildtools`
  - No functional difference wrt *art* 3.02.00

- *art* 3.02 release notes still being worked on

- Report came in today that *art*'s dictionary checker does not allow `std::bitset` persistence.
  - The fix for this requires a new *art* version

Change in stakeholders meeting schedule

- **The last Thursday afternoon stakeholders meeting will be February 21st.**

- **Beginning Tuesday, March 5th, we will meet every other week at 9 am, alternating with the LArSoft coordination meeting.**
  - Stay tuned for meeting coordinate details.

- Reasons:
  - *art* stakeholders rarely need to meet every week—biweekly meetings are likely sufficient.
  - It's generally easier on users' (and our) schedules to have one predictable time when either LArSoft or *art* stakeholders will meet
  - It aligns better with the goals and efforts of the SciSoft team, which supports both *art* and LArSoft

- I will announce this to the art-users and art-stakeholders email lists.
